BUY and PLANT NOW!

THESE THREE VARIETIES WILL BLOOM THIS FALL

Sternbergia

Lutea major. A very effective autumn-flowering bulbous plant producing crocus-like flowers of a rich golden yellow. The bulbs make a charming decoration if planted in bowls or pots, and flower a few weeks after planting. Out-of-doors it likes a warm, well-drained situation on banks or borders, where it should be left undisturbed. Plant 7 inches deep, and in cold districts a covering of dry litter should be given in winter. Fine for the rock-garden.
$2.20 per doz., $15 per 100

EXQUISITE! THIS AUTUMN-FLOWERING Crocus Zonatus

That brings to October and November a bright reflection of the blue skies of April and May. Here is a charming rarity for your rock-garden or to scatter through the shrubbery borders, with its clusters of large flowers of the palest lavender imaginable in exquisite contrast to the central anthers of golden orange. As it is perfectly hardy, it will increase in number from year to year. 65c. per doz., $4.25 per 100, $38 per 1000

Speciosus. Bright violet-blue, prettily veined, having orange-red anthers and light yellow throat. Large, handsome, and showy. Fine for naturalizing.
65c. per doz., $4.25 per 100, $38 per 1000

Colchicum

Known as Autumn-flowering Crocus, blooming in August and September. Most effective in large groups among low-growing perennials, as they extend the season of bloom and color.

Autumnale. Purple, with light veins.
45c. each, $4.50 per doz.

TRIUMPH TULIPS

A new strain resulting from crosses of Single Early Tulips and the Darwins. The flowers are very much like the Darwins but the plants are sturdier and there are new Tulip colors among them. Their special importance, however, lies in the fact that they bloom in between the Single Earlies and the Cottages, filling that formerly bloomless gap, and remain in bloom longer than any other type.

SUNDEW TULIP

Truly the most unusual Tulip offered. A gorgeous cup of dazzling crimson carried on a tall, stately stem. But most outstanding is the intricate fringed and laciniated edge that lies horizontally across the petals. This is further enhanced by a beautiful blue base. Does not fade in the sunlight and lends itself artistically in a cut-flower arrangement. Height 28 in.
85c. per doz., $6.25 per 100

COTTAGE TULIPS

When the Dutch finally recovered from their mania over the broken Tulips, their lovely lily-flowered and slender self-colored varieties had practically disappeared, but these were later collected from cottage gardens in England and France where they had been cherished for generations. Under the name of Cottage Tulips they are again popular, especially since hybridizers have increased the range of their brilliant colors. The most graceful of all the hybrid Tulips will be found under this head. Many of them are fragrant.

Advance. Perhaps the most remarkable of the Cottage type, a cross between Gesneriana spathulata and the Botanical Tulip Greigi. A giant, fiery red with a purplish bloom on the outside and a blue inner base. When in full bloom it resembles the Oriental Poppy. The flower is borne on a tall, erect, 30-inch stem, and lasts longer than any other Cottage Tulip. $2 per doz., $15 per 100

Exhibition Dutch Hyacinths

A special pick of the largest bulbs produced in Holland. Sound, plump, and well matured, producing strong spikes of great length —you can buy no better. This size should always be selected for pot or glass culture, as they are far more vigorous in growth and produce larger and finer flower-trusses than the smaller bulbs. Unexcelled for outdoor planting for the same reason.

Hyacinths grow in any good garden soil, but a well-enriched soil induces more perfect growth and larger flower-spikes. Well-rotted barnyard manure, sheep manure, or bonemeal, liberally applied, well dug in, and mixed with the soil is very helpful. Set bulbs 6 inches apart each way and 8 inches deep (to bottom of bulb). Hyacinths are perfectly hardy, but a light covering of salt hay, leaves, or straw after the ground is frozen, will prove beneficial.

Schling's Narcissi and Daffodils

VIRGINIA GROWN. FULLY ACCLIMATIZED. SUPERIOR TO THOSE FORMERLY IMPORTED

Plant generously in your lawn (for they will be through blooming before you cut the grass), along your shrubbery border or fringing the roadside—anywhere they will grow unmolested. All Daffodils, especially the Poeticus, do best if planted in early fall, September or October. Set the bulbs at a uniform depth; otherwise they will flower irregularly. Plant bulbs 6 inches deep and the same distance apart. Daffodils are easily grown in pots for winter blooming, the Giant Trumpet and Double-flowering varieties being especially good.

Large plantings of *L. candidum, L. tigrinum,* and the Speciosum varieties are recommended, and also the handsome, early-blooming *L. elegans* and *L. superbum.* They thrive in any well-drained garden soil, but do best in the hardy border or among shrubbery. Plant bulbs twice their depth and when frost sets in, cover with 4 to 6 inches of leaves or litter, to be removed in spring.

Prize Peonies for Fall Planting • 1939

A selection made NOW assures a special pick of the strongest roots

WE SHIP OUR PEONY ROOTS IN SEPTEMBER. Purchaser pays express charges on Peony Roots

Always plant Peonies in the fall, for the roots are then in prime condition. They grow well in any good garden soil. Care should be taken to keep manure a few inches away from the crowns of the plants, except the first winter, when a coarse mulch an inch or more deep may be placed directly over the plants to prevent the frost from heaving them. It is not necessary to fertilize rich soil. In poor soil, the manure should be kept 10 inches from the surface, and well mixed with the subsoil; after planting, apply manure to surface as previously advised. Never allow manure to come in contact with the roots, as it rots them. Set roots 2 feet or more apart and cover top eyes not more than 2 to 3 inches; deep planting often results in blind growth.

Our Peonies are extra-strong, field-grown roots (not divisions).

Official ratings of the American Peony Society are given where available.

Abbreviations used to signify blooming time are: E, Early; EM, Early Midseason; M, Midseason; LM, Late Midseason; L, Late.

Plant a Strawberry Bed This Summer

ENJOY YOUR OWN BERRIES NEXT JUNE

One hundred plants, with fair cultivation, will yield 30 quarts of berries the first year in a space only 4 by 50 ft.

Our Pot-grown Strawberry Plants can be set out any time during July and August, and even as late as September 30. Early plantings produce biggest crops. Set plants in rows, 1 foot apart. Allow space of 2 feet between rows for cultivation. Pinch off all runners as they appear and cover the bed lightly with leaves, salt hay, or manure in December after the ground is frozen. Remove covering in early spring; if salt hay is used, it may be left between the rows as a soil-mulch to keep the soil moist and the berries clean. **Purchaser pays express charges on all Strawberry Plants.**

Pot-Grown Strawberry Plants

Ready for shipment July 5 to October 31. Early orders always assure strongest plants. **All varieties offered are perfect flowering.**

Brandywine. Midseason. Large; bright crimson; highest quality.
Cooper. Second early. Extremely large, bright red berries; excellent quality.
Jumbo. Midseason. Big berries of fine flavor, borne in abundance a long time.
John H. Cook. Second early. Firm, blood-red berries of good quality.
Marshall. Midseason. Of rich flavor and almost devoid of acid.
Sharpless. An excellent late variety. Fruits dark red, medium to large.

Strong, pot-grown plants of the above 6 varieties, $2 for 25, $7 per 100
Selected extra-strong, pot-grown plants of the above 6 varieties, $2.50 for 25, $8 per 100

Three Specials for the Home-Garden

Premier. Extra early. The largest and by far the firmest of all early varieties. Fruit scarlet-crimson and very luscious.
Big Joe. Midseason. Unusually healthy, vigorous, and productive. Berries large, light glossy crimson and of excellent flavor.
Chesapeake. Late. Finest and most luscious for the home-garden. Berries very large, firm, with the fine flavor of the wild Strawberry.

The above three varieties will lengthen your Strawberry season considerably and give berries for fully a month.

Strong, pot-grown plants of the above, $2.50 for 25, $8 per 100

Selected extra-strong, pot-grown plants of the above, $3 for 25, $9 per 100

Fall-Fruiting or Everbearing Strawberry Plants

As luscious as the June berries, bearing continuously from June until frost. For a heavy crop in the fall, pinch out all blossoms until July. Preserve all runners, as they, too, will bear fruit.

Mastodon. (The Wonder Berry.) The best-flavored, largest, most productive of all Everbearing varieties. Heavy crops of fine, luscious berries from September to frost. Even the runners bear fruit freely and should be left attached.
Aldrich. Another very fine and extremely productive Everbearing variety. Berries of good size and fine flavor.
Berri Supreme. Large, smooth, regularly shaped berries of fine flavor. Yields prolifically.
Progressive. Extremely vigorous. May be allowed to bear in June without impairing the fall crop.

Extra-selected strong, pot-grown plants of all Everbearing varieties, $4 for 25, $12 per 100

Introduced by U. S. Department of Agriculture

Dorsett is the most productive Strawberry. Delicious, good-sized berries of scarlet color on disease-free, vigorous vines.
Fairfax rivals Dorsett but is darker and more persistently fruiting in unfavorable weather. However, it is not as prolific and lacks the wild Strawberry flavor of Dorsett. Try both varieties.

Pot-plants, $3 for 25, $10 per 100. Selected plants, $3.50 for 25, $12 per 100
